

Dear Dr. Brooks,

I am writing this note with hopes that it encourages someone to give you an opportunity to treat them.

In 1992 I fell off of a roof and broke my back. I had a complete loss of movement and feeling below my waist. After a 20+-hour surgery and nearly a year of physical therapy I had made a miraculous recovery. Although I still had limited mobility in my right leg and little to no sensation in both, I was walking again and had resumed a pretty normal life.

Due to the fusion of 10 vertebrae along with rods, screws and hooks in my back needless to say I have back pain. On top of the cure for my accident, In 2004 I discovered numerous other issues that I have to contend with now. These include severe osteoarthritis, bulging discs and a narrowing of the canal for my spinal cord.

Since 1992 I have seen numerous chiropractors, physical therapists, doctors, acupuncturists and other medical professionals. I have tried many conventional and non-conventional remedies to attempt to relieve the constant pain that I experience. All of these have given me only minor relief for a very limited amount of time.

In March of 2004 I found Dr. Brooks. He has aggressively treated me and I have experienced a marked reduction in pain and an increase in mobility. Although I am unable to work I am in fact more functional.

I highly recommend Dr. Brooks. He is a sincere and genuine person with my best interests in mind.

Without a doubt, Dr Brooks will be my chiropractor as long as I have a need.

Sincerely

Chris Haring
